

ATM Explosive Deterrent Solutions

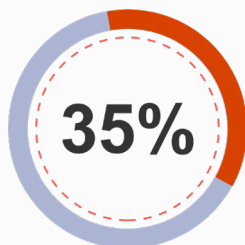

True prevention is not waiting for bad things to happen.

Protect your customer and your investment

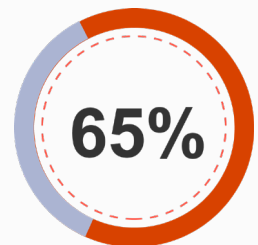

ATMs today are increasingly under physical attack. Explosive attacks are seeing an unprecedented rise in double figures in the past 5 years. What can you do to keep your customers' safety top of mind?

Increase in GAS attacks

Primarily due to explosives

Every life matters

Every life is important which is why they must be protected.

Explosive attacks occur simply because the ATM is perceived as vulnerable either because of its physical attributes or due to its physical location.

InfoMAT's approach to ATM physical security is one of pure prevention. So when an ATM does in fact come under attack, it can withstand the pressure of the physical force needed to penetrate the ATM's shutter.

Prevention of this type will not only save human lives but will also save millions in building damages as well as brand image.

Physical attacks on ATMs come in various flavours and popularity depending upon where your ATM estate resides in the world.

Cameras, armed guards, stronger safes and even protective barriers have proven to be less effective when it comes to explosive attack for these simple reasons:

- Not preventative
- Reactive at best case
- Extremely costly

ShockBuster prevents gas & explosive attacks

Begin by inhibiting attacks on your ATM from the moment just after installation.

With ShockBuster your ATM will receive the highest level of protection through the innovative design built with prevention as top of mind.

One of ShockBuster's many benefits is that it works to prevent both gas **and** solid explosives from entering the ATM safe.

An intelligent reinforced steel plate detects unwelcomed penetration to the dispenser shutter.

For added protection, the ShockBuster solution has the ability to trigger an audible, visual or silent alarm. Optionally, a dispenser shutdown command can be issued to prevent any further economic loss.

Damages can be as high as \$100,000 per attack

Protection begins now

ShockBuster can be installed either at the factory or on-site, providing maximum flexibility to your deployment requirements.

ShockBuster is compliant to all CE regulations.

ShockBuster requires no additional maintenance, unlike ink-staining devices which require scheduled service visits.

ShockBuster is multi-vendor enabled.

ShockBuster is available for cash recyclers.

InfoMAT has been working with ATMs for over 25 years and has developed vast experience and comprehensive capabilities. ShockBuster was first introduced into the Italian market over 6 years ago. Installations have continued to expand in countries most impacted by such attacks.

- ✓ **1st** in the market to offer protection to NCR's Cash Recycler
- ✓ comprehensive consulting and training is provided to allow OEM's and self-maintainers to deploy and maintain without impacting your customers.
